Typing in Mwango Script

The Sheek Bakrii Saphaloo script keyboard (ဒ) is an experimental keyboard that supports the typing of the Sheek Bakrii Saphalpo script using Qubee orthography rules. The keyboard requires the included *"Athinkra: Sheek Bakrii Saphaloo"* font which in turn encodes the script in the Unicode Private Use Area.

> Basic typing: **akkam** becomes: ⋯
> **naqaa** becomes: ⋅⋅

There is no difference when uppercase or lowercase letters are typed. **Naqaa**, **NAQAA**, and **nAqAa** will all produce ⋅⋅. However, uppercase and lowercase will be different when vowels (a, u, i, e, o) are typed alone. For example:

> **<u>a</u>kkam** becomes: ⋅⋯
> **<u>A</u>kkam** becomes: ⋅⋯

The uppercase vowels (A, U, I, E, O) are used to type the (ع, ٥) vowels used in words from other languages <mark>[Note: this can change, suggestions needed]</mark>.

Typing adheres to Qubee rules as much as possible, there are a few special cases where there are differences, these cases are highlighed in the table on the following page. When a sound from another language is not found in Qubee writing, the special letter "x" is used to help type it. For example:

> hx ⇨ ⋅
> kx ⇨ ⋅
> sx ⇨ ⋅

Apostrophe, ˈ, is another special symbol that can be typed in the usual way of speling words in Qubee, but will be ignored in the Sheek Bakrii Saphaloo alphabet:

> har'a   ⇨ ⋯
> mish'aa   ⇨ ⋯
> dhi'eenna ⇨ ⋯
> taa'ee   ⇨ ⋅⋅

A special case is for the "glottal stop" in the Sheek Bakrii Saphaloo alphabet, where the glottal stop is typed with apostrophe after the vowel. Examples:

> a'   ⇨ ⋅
> ax'   ⇨ ⋅
> A'   ⇨ ⋅
> Ax'   ⇨ ⋅

Finally, to type an apostrophe by itself, press the apostrophe key two times:

> ' ' ⇨ ˈ
